REASONS FOR ALLOWANCE

Claims 28 thru 56 are allowed.

The following is a statement of reasons for the indication of allowable subject matter: In regard to claim 28, the prior art of record fail to teach a converter system, comprising:

at least one buffer module configured to store energy, wherein the buffer module is configured to be supplied with energy for periods of time when the intermediate circuit voltage exceeds a first critical value and an overall regenerative power of a first drive module exceeds a motive power of a second drive module to store the supplied energy, and to supply the stored energy to at least one drive module when a total motive power of the at least one drive module exceeds the regenerative power to power the corresponding electric motor; wherein the buffer module includes a capacitor and a diode, and a cathode of the diode is directly connected to a negative plate of the capacitor and in combination with the other limitations of the base claim.

In regard to claim 39, the prior art of record fail to teach a converter system, comprising:

at least one buffer module configured to store energy, wherein a capacitor of the supply module directly connected to the intermediate circuit voltage and a capacitor included in the buffer module are configured so that during motive operation at a nominal load, with the capacitor of the buffer module directly connected to the intermediate circuit voltage, an a.c. voltage component of the intermediate circuit voltage is less than half an a.c. voltage component with the buffer module removed

Application/Control Number: 10/510,562

together with the capacitor of the buffer module and in combination with the other limitations of the base claim.

In regard to claim 48, the prior art of record fail to teach a converter system, comprising:

at least one buffer module configured to store energy, wherein the buffer module is configured to be supplied with energy for periods of time when the intermediate circuit voltage exceeds a first critical value and an overall regenerative power of a first drive module exceeds a motive power of a second drive module to store the supplied energy, and to supply the stored energy to at least one of the drive modules when a total motive power of the drive modules exceeds the regenerative power to power the corresponding electric motor; wherein the buffer module includes a capacitor and a diode, and a cathode of the diode is directly connected to a negative plate of the capacitor and in combination with the other limitations of the base claim.

In regard to claim 53, the prior art of record fail to teach a method for operating a buffer module in a converter system, at least one buffer module configured to store energy, comprising:

measuring the intermediate circuit voltage; in response to the intermediate circuit voltage exceeding a first critical value, supplying the buffer module with energy when an overall regenerative power of a first drive module exceeds a motive power of a second drive module to store the supplied energy; and supplying the stored energy by the buffer module to at least one of the drive modules powered by the intermediate circuit voltage when a total motive power of the drive modules exceeds the regenerative

Application/Control Number: 10/510,562

Art Unit: 2837

power to power the corresponding electric motor; wherein the buffer module includes a capacitor and a diode, and a cathode of the diode is directly connected to a negative plate of the capacitor and in combination with the other limitations of the base claim.

In regard to claim 56, the prior art of record fail to teach a converter system, comprising:

a first capacitor not directly connected to the intermediate circuit voltage configured to be energized by an electronic circuit breaker in a controlled manner as a function of the intermediate circuit voltage, the first capacitor configured to release energy to an intermediate circuit; and

a second capacitor directly connected to the intermediate circuit voltage, a capacitance of the first capacitor and a capacitance of the second capacitor configured so that during motive operation at nominal load, with the capacitor directly connected to the intermediate circuit, an a.c. voltage component of the intermediate circuit voltage is less than half an a.c. voltage component with the first capacitor removed and in combination with the other limitations of the base claim.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
